How to upgrade your GT series box via a U-disk
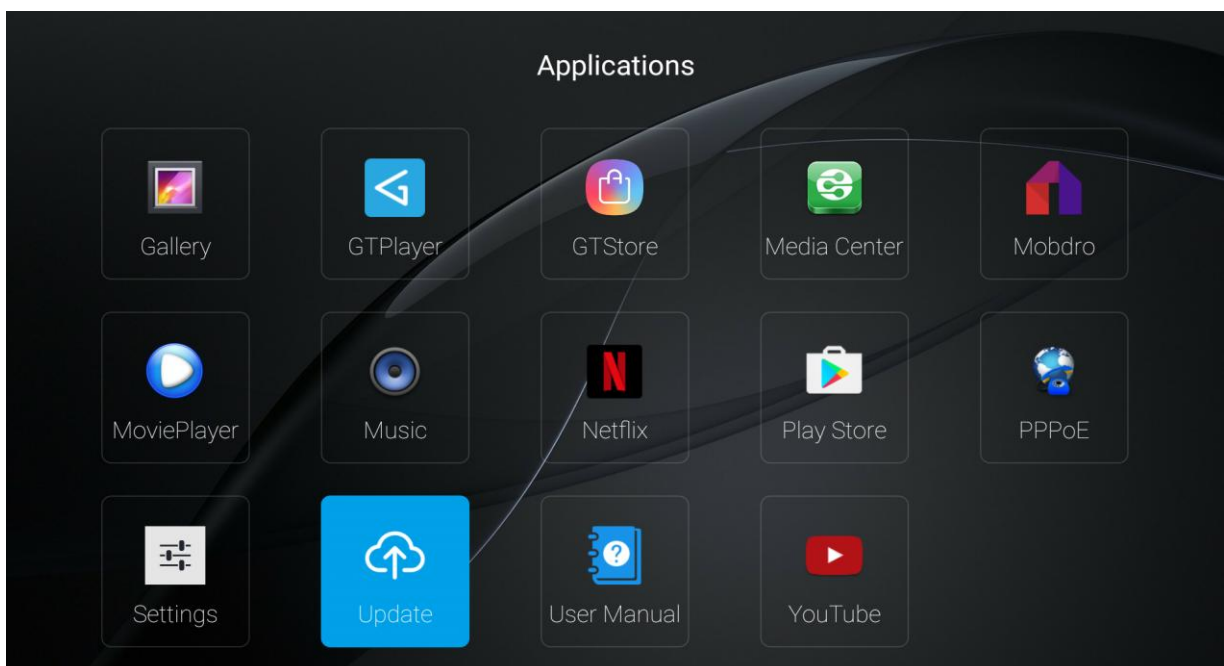

V1. 2

Jan. /28/2019

Preface

This document is a guide to tell you how to upgrade the firmware of your GT series box via a U-disk.
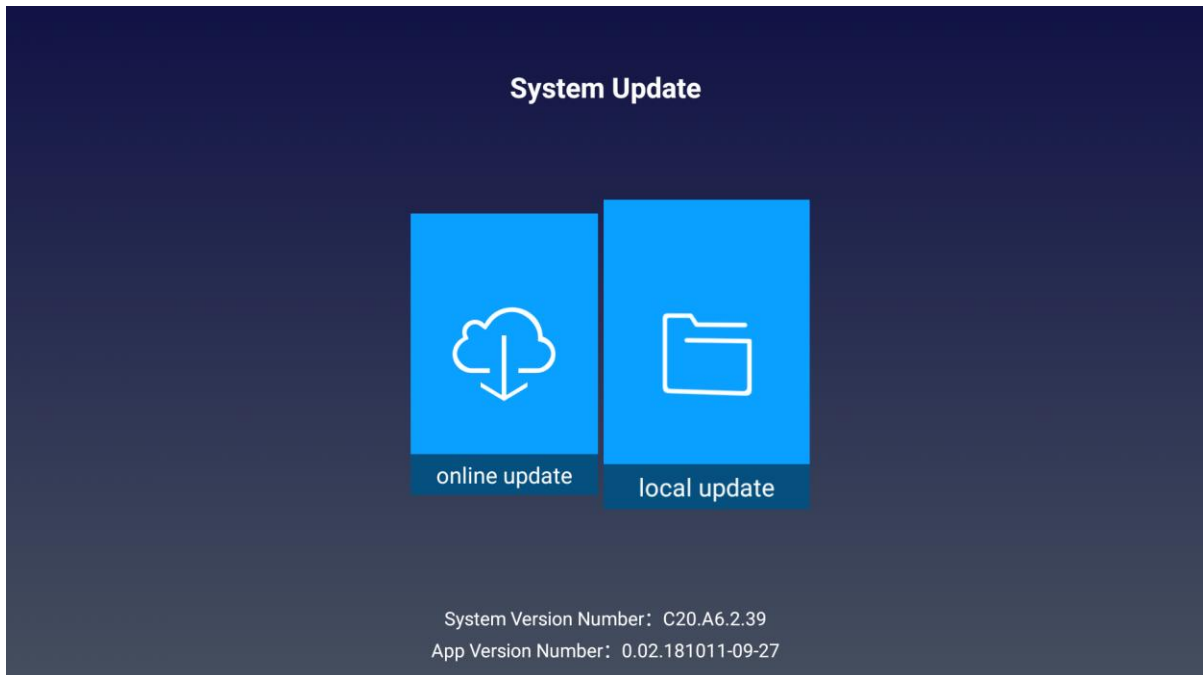

1. Prepare an empty U-disk in FAT32 format;

2. Download the correct firmware file(it is a zip file, don't unzip it) and copy it to the root directory of the prepared U-disk;
(If you want to downgrade the version, please put the recovery.img file of the old version and the firmware of the old version to the root directory of prepared U-disk at the same time.)
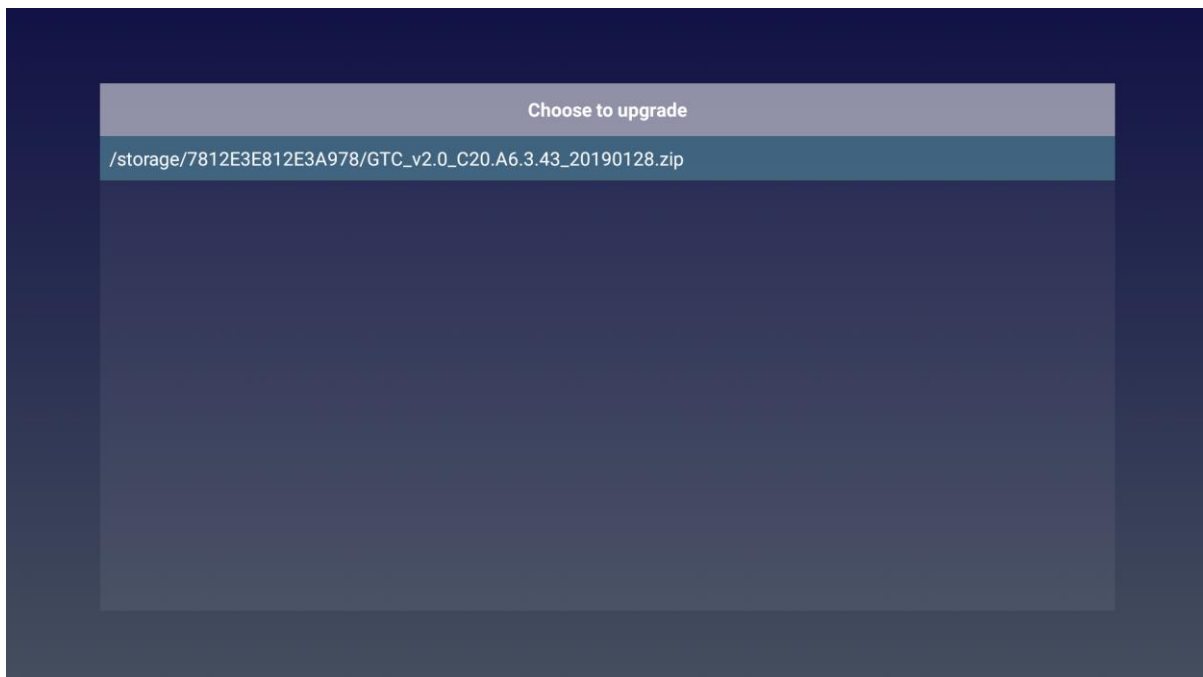

3. Insert the U-disk with the firmware to your GT series box;

4. Goto Applications menu and open the "Update" app;

![GTMEDIA®]

5. Click the right button "local update" to open the list of firmware files;

6. Select the correct firmware from the list of firmware files;

![GTMEDIA logo]

7. Click the OK button to start upgrade.Please wait for
the process, the box will automatically restart after
the upgrade.

(If you need to delete user data, please tick these
two items)
